AFFIDAVIT

Re: Improved power assisted lever arm ratchet
Serial Number 90/841,570

RECEIVED
DEC 04 2003
TECHNOLOGY CENTER R3700

I, Gary Boccaduttre, president of G&B Products, Inc., located at 358 North Middaugh Street, Somerville, New Jersey, 08876, am one of the inventors regarding the above-named invention. A summary of my training and experience is attached.

My co-inventor, Paul V. Mannino, and I have a combined approximately 50 years of experience in the field of automotive repair and the use of manual and power assisted hand tools in repair shop maintenance and manufacturing settings and are familiar in detail with the various types of configurations of hand tools and power assisted tools available to mechanics, maintenance people, and the like.

As disclosed in the prior art, power assisted lever arm ratchets, almost from their inception, were configured to produce compact configurations with the ratchet drive closely coupled to the handle, which typically incorporates the drive motor. Both Mr. Mannino and I have, on innumerable occasions over the years, as with virtually all other mechanics and maintenance people, had to contend with tightening or loosening fasteners such as nuts and bolts in difficult-to-access locations in various situations including automotive maintenance, machinery repair, equipment installation, and the like. No product was available that really facilitated working in these types of situations. Typically, what we and other individuals did to contend with these types of situations was to either remove other items that might have been away in accessing the hard-to-reach location or undertake a tedious tightening or loosening by essentially turning a nut or bolt

one or two flats at a time to the extent permitted by the inaccessibility of the location.

No product which performs in the manner of our improved power assisted lever arm ratchet was available from any manufacturer nor was any combination of extended sockets or ratchet extensions suitable to solve the problem. In the latter part of 2000, we undertook developing the improved power assisted lever arm ratchet and devised the product which is the subject of this patent application. Subsequent to development, we commenced manufacturing and selling various versions of this invention.

As shown on the attached pages of the M Eagles Warehouse catalog, the Medco catalog and the Advanced Tool Design catalog displaying our product, it is readily apparent that there are no other products with a similar configuration being offered for sale.

Since our commencement of manufacturing, we have produced 3/8 and 1/4 inch drive units. Sales for the first full year of production in 2002, most through the Medco and M Eagles catalogs, exceeded 3,000 units (see attached purchase orders for Medco Tool and M Eagle Warehouse, several hundred units were sold through other channels).

This is a very significant number of sales for a specialty tool which is being sold through a limited number of distributors to professional mechanics. The acceptance of this product by major tool distributors is a further indication of the demand commercial viability of this invention. The success of this product clearly indicates that it is satisfying a previously unfilled need.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

Gary Boccaduttre

Qualifications

The following are a list of my accomplishments in the manufacturing arena: management, mechanical design, product engineering, and production.

Education

1969 – 1973 Middlesex High School
1973 – 1975 Somerset County Technical Institute
1977 – 1979 Middlesex County College (Tool & Die Apprenticeship Program)

Employment

1975 – 1976 Republic Warehouse
Automotive Parts Distributor

1976 – 1977 Team Optical Corporation
Foremen: in charge of maintaining all production equipment for the manufacturing of eyeglass frames.

1977 – 1977 Somerset Specialty Machining, Inc.
Tool and die apprentice
Set-up and run various machines such as lathes and mills.

1977 – 1979 Industrial Microwave Corporation
1st Class Machinist

1979 – Formed G & B Machine, Inc.
Prototype & production machining of ferrous, non-ferrous and plastic materials. Finish machining of ferrous & non-ferrous castings. Design assistance for cost effective manufacturability.

Miscellaneous Projects

1982 - 1985 Formed partnership to manufacture 11ft. satellite dish antenna.

1992 – 1996 Formed partnership to design and manufacture large format holographic laser printers for the newspaper industry.

1998 - Formed G & B Products, Inc.
To design, manufacture and distribute various consumer and industrial products.
